

Mar, 2009

**To: SK's Valued Customers**  
**From: SK Energy Polymer Business Division**  
**Sub: REACH Status on SK products (PE/PP)**

---

First of all, we are pleased to respond to your request regarding SK Energy's compliance with European Regulation "REACH" (Registration Evaluation and Authorization of Chemicals).

SK has been actively preparing to meet the requirements of REACH. We recognize that this regulation will have a significant impact on companies that make or sell products in EU.

All of PE/PP we produce are composed of some monomers manufactured on our own and other substances purchased by SK Energy from raw material vendors.

We have finished pre-registration for all monomers that we produce and started to undertake registration. In case of other substances purchased by SK Energy, we are actively working with its suppliers to assure raw material availability in REACH.

We have reviewed all relevant substances and the composition for **R370Y**.  
**R370Y** doesn't contain any substance of very high concern (SVHC)  
Also, **R370Y** is not restricted in REACH when you manufacture articles with them.  
Therefore, there is no problem to export your articles made from **R370Y** to EU.

To make it sure, we'll keep in contact with raw material suppliers and monitor their REACH registration activity all the time.  
Therefore, we will update all information related REACH activity if there is any change in our REACH status.

We thank you for your understanding in this matter and for more information, please contact REACH manager in Polymer business division in SK Energy.
